We appreciate the suggestion to reduce the number of abbreviations used in the text (made by both reviewers). We have removed some uses of abbreviations (particularly in the figure captions). But our main response hopefully makes the text easier to read without introducing repetitive use of long phrases (aerosol extinction, aerosol phase function, etc.), by replacing acronyms and abbreviations with mathematical symbols. These include the following:

$\beta_a$ for "aerosol extinction" (AE)
$\Theta$ for "solar scattering angle" (SSA)

$P_a$ for "aerosol phase function" (APF)

$P_R$ for "Rayleigh phase function" (RPF)

$\rho$ for "altitude normalized radiance" (ANR)

$y$ for "aerosol scattering index" (ASI)
