Interactive comment on “Ozone Profile Climatology for Remote Sensing Retrieval Algorithms” by Kai Yang and Xiong Liu

Anonymous Referee #2

Received and published: 3 July 2019

The climatology described in this paper based on MEERA-2 data is much more complete than a purely data based climatology since observations rarely produce complete sampling. It produces full latitude / longitude coverage. Both total ozone dependent and tropopause dependent versions are created. The negative of course is that it can only be as accurate as the underlying MEERA-2 model. Nevertheless, this climatology is a useful addition for use in remote sensing algorithms. I recommend publication.
